

# Water Reuse in *South Florida*

## District Funding:

The District provides support to reuse projects through the Alternative Water Supply Funding Program. Projects include reclaimed water used for landscape or golf course irrigation, wetland enhancement and to recharge groundwater. The District also provides funding for utilities to construct reclaimed water production facilities.

## Available throughout the District:

In the District's 16 South Florida counties, more than 230 million gallons of reclaimed water are used each day. That's the equivalent of almost 15,000 residential swimming pools!

# Examples of Reuse Projects

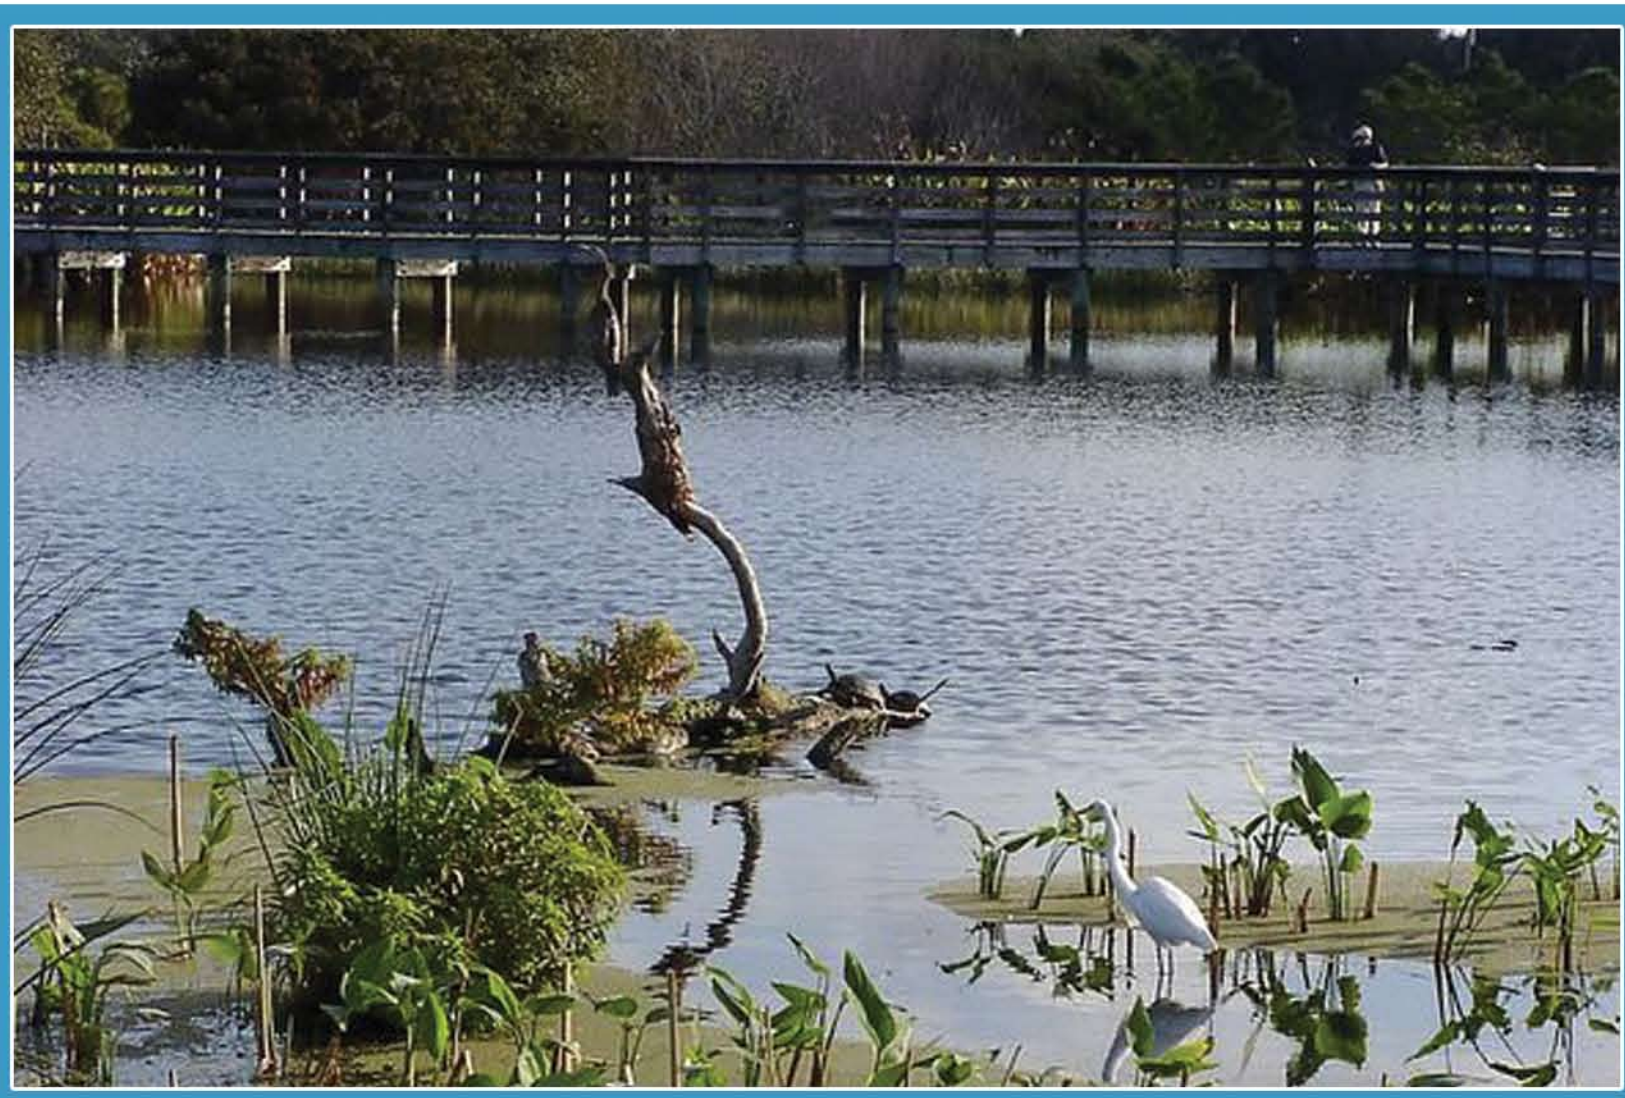

**Orange Co./Orlando Conserv II**
